

/home/ms/openpose/include
/openpose/net/resizeAndMergeBase.hpp

```
graph BT; A["/home/ms/openpose/include  
/openpose/net/resizeAndMergeBase.hpp"] --> B["/home/ms/openpose/include  
/openpose/net/headers.hpp"]; B --> C["/home/ms/openpose/include  
/openpose/headers.hpp"];
```

The diagram illustrates the include hierarchy for OpenPose headers. It consists of three rectangular boxes arranged vertically. The top box, which has a gray background, contains the path `/home/ms/openpose/include/openpose/net/resizeAndMergeBase.hpp`. The middle box contains `/home/ms/openpose/include/openpose/net/headers.hpp`. The bottom box contains `/home/ms/openpose/include/openpose/headers.hpp`. Blue arrows point upwards from the middle box to the top box, and from the bottom box to the middle box, indicating that the top file includes the middle file, and the middle file includes the bottom file.
